

If you were diagnosed with glaucoma, what would you want to have?

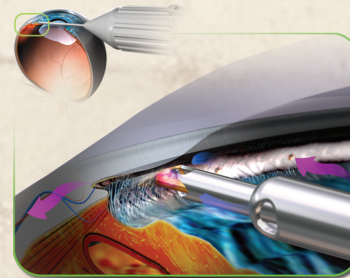

TRABECTOME®

Micro Surgical Management of Adult & Infantile Glaucoma

Trabectome Now in Australia

Since 2006 Trabectome has allowed physicians all over the world to offer an effective and safer alternative to standard high risk glaucoma surgery. For the first time, it's now available in Australia.

Using a focused electro-surgical pulse, Trabectome safely ablates and removes a 90°-120° strip of trabecular meshwork; thereby unroofing Schlemm's canal allowing direct access to the eye's natural drainage pathways.

◀ **Ab interno trabeculotomy**
Removal of diseased tissue using electro-surgical pulse. Continuous irrigation and aspiration removes debris and regulates temperature.
