Trabectome is an elegant and safe anterior segment procedure that provides excellent and effective reduction of IOP.

Brian Francis, MD, MS
Doheny Eye Institute

It's a question of finding an alternative therapy that might be effective without having to put a tube in an infant's eye. All these factors, in some ways, perhaps make Trabectome something we should be looking at in children.

Ken K. Nischal, MBBS
University of Pittsburgh Medical Center, Children's Hospital

This is good for the eye. You could not tell by looking without a gonioscope that something so powerful had been performed.

Nils Loewen, MD, PhD
Director of Glaucoma, UPMC

The trabectome allows me to offer an effective alternative to standard high risk glaucoma surgery. The risk-benefit ratio for trabectome places this procedure solidly at the top of my preferred surgical interventions for IOP control.

Sameh Mosaed, MD
Gavin Herbert Eye Institute, UCI

Trabectome is by far the most utilized, has the most experience, and the biggest record set. It has a lot going for it. Basically, it's way ahead of the MIGS curve.

Don Minckler, MD, MS
Professor Emeritus of Ophthalmology
Clinical Professor of Laboratory Medicine
(Ophthalmic Pathology)

Trabectome is a procedure that allows patients to have a good quality of life with lower eye pressure that can be stabilized.

Constance O. Okeke, MD, MSCE
Virginia Eye Consultants
Glaucoma Specialist
Cataract Surgeon
